

Direct To Fabric Digital Prints

DIRECT TO FABRIC DIGITAL

Direct to Fabric Digital Printing

Digital Flags and Banners just got a lot more exciting and affordable!

What is DTF Digital?

DTF Digital combines the latest direct to fabric digital printing technology and new generation PKU 2008U polyknit to produce full weight 125gsm flags and banners that not only look fabulous from both sides but will stand the test of time in our harsh outdoor environment.

No more lightweight "Dye Sub" Flags that look a million dollars but won't last the distance.

With DTF digital the strike through is nearly 100% and you get fabulous true to life image quality. The vegetable based dyes are oven baked and will remain colour fast for at least as long as our high quality screen printed flags.

Cost Efficient and Easy on the Environment

The DTF Digital process uses vegetable based dyes, less materials and energy and produces minimal waste unlike the dye sublimation process. The savings we make are passed on to our customers.

Soft Signage Applications

Soft Signage is currently the fastest growing sector in the signage market. More and more designers are specifying fabric to replace vinyl and paper for instore displays, portable displays, retail and commercial interior displays and wall art etc.

Fabric is soft and inviting and adds elegance and class to any environment. It is lightweight and easy to transport and reuse - wrinkles can be ironed out.

Applications include:

- Street Banners
- Corporate Flags
- Indoor and In Store Banners
- Retail and Trade Displays both permanent and portable
- Wind Blades
- Specialty Flags
- Novelty Flags
- Wall Hangings
- Stage Back Drops
- Pull Up Banners
- Light Boxes
